

Title : Integration Architect

Location : Bangalore / Mumbai / Pune

This role is accountable for leading the design and delivery of the integration of D365 F & O & other Finance platforms. Any new development or customizations to the integrations for various markets, and the target state integration architecture for the business platforms

- This role involves the creation of Roadmaps, high level dependencies for ensuring all relevant options are explored for time, cost and compliance to the company's standards, policies and practices while meeting the business' requirements. This role will act as the bridge between business and technology stakeholders. Expected apply a pragmatic delivery lens to the architectural delivery, to ensure that technology implementation is achievable and drives the maximum value for the business against investment

### **Job Description:**

Key responsibilities:

Comply with all governance and due diligence applicable to the solution, and ensure compliance is maintained across the platform designs

- Review of solutions against Architectural principles and technology blueprint including assessment of impact of non-compliance giving pragmatic outcomes
- Work with individual platforms Architects on integration patterns, capabilities, and to ensure that system needs are functionally allocated to the right systems
- Ensure important decisions and the rationale underpinning them is captured, and that technology risk is visible, accepted and managed
- Complete High-level design documentation bridging platform and infrastructure teams, and support the iteration of detailed designs underpinning
- Create current and target state architecture models for the integrations spanning the global business platforms estate with input from all regions and geographies
- Promote the use of shared enterprise technology assets to not only help accelerate time to value but also to reduce costs and organisational complexity
- Work to ensure that domains/projects do not unknowingly duplicate functionality or diverge from enterprise technology strategic direction

### **Professional Knowledge/Skills**

- 12+ years total experience comprising a blend of business analysis, development & Integration architecture experience
- Working in a complex matrixed, international and cross-cultural organisation
- Broad technical expertise combined with strong leadership and communication capabilities to drive innovation and change
- Experience delivering Enterprise and Integration Architectures – capturing the business vision and translating that into deliverable programmes of work and integration flows
- Experience of integrating some or all of the following platforms (Nice to Have):
  - \* Dynamics 365 Finance & Operations / PSA
  - \* Salesforce
  - \* Workday
  - \* Workfront

- \* Should have 5+ years of working experience on any of the middleware's – Snaplogic, Dell Boomi, Biztalk
- \* Strong experience of Integration and data architecture, particularly Enterprise Application Integration
- Experience in various software designs, languages, and integration architecture design implementation
- Solution definition and problem-solving skills
- Good understanding of business processes
- Thorough understanding of Design engineering principles and best practices
- Strong understanding of analytical skills and techniques
- Deeply understands development, testing, and delivery methodologies, and is able to mesh the different approaches needed across platforms into a cohesive delivery approach;
